

YASHPAL SAINI

Data Analyst | SQL · Python · A/B Testing · Product Analytics

New York, NY | (646) 289-1606 | yashsaini30668@gmail.com | [Technical Portfolio](#) | [LinkedIn](#) | [GitHub Profile](#)

SUMMARY

Data Analyst with 2+ years running statistically rigorous A/B experiments, building self-serve analytics infrastructure, and translating complex findings into product decisions at scale. Built Enchanted AdLab, a full-stack experimentation platform with Bayesian testing, sequential analysis, and real-time revenue impact modeling, because the best analysts build the tools their teams rely on.

AREA OF EXPERTISE

SQL (Advanced) · Python (Pandas, NumPy, Scikit-learn) · R · BigQuery · Snowflake · dbt · Tableau · Looker · Plotly · Streamlit · A/B Testing · Experiment Design · Statistical Significance · Bayesian Analysis · Sequential Testing · Funnel Analytics · Product Analytics · User Behavior Analysis · Attribution Modeling · Cohort Analysis · LTV Modeling · Customer Segmentation · Data Storytelling · GA4 · Statistical Analysis · EDA

EXPERIENCE

Research Foundation of CUNY | New York, NY

Aug 2025 – Present

Data Specialist Intern

- 55% faster insight delivery by redesigning 7 fragmented sources into a unified BigQuery warehouse with automated SQL pipelines for 26 institutional stakeholders.
- 37% data accuracy improvement by building data quality frameworks catching anomalies at ingestion, ensuring reliable data for downstream product analysis and executive reporting.
- 65% engagement lift and 40% reduction in ad hoc requests from weekly experiments with defined MDEs, translating findings into structured readouts for cross-functional stakeholders.
- Attribution analysis built using Python to identify which channels drove highest LTV cohorts, enabling data-driven budget reallocation and informing long-term retention strategy.
- Automated recurring data collection across 26 sites using Power Automate, reducing manual entry by 60% and ensuring real-time data freshness for downstream product analytics.

I3 Infosoft Pvt. Ltd. | Noida, India

Sep 2022 – Jul 2024

Data Analyst

- 18% product engagement lift from a Python segmentation model across 1M+ records, identifying high-value cohorts via LTV and behavioral analysis that reshaped growth strategy.
- Quarterly strategy shifts from A/B experiments with pre-registered hypotheses and significance thresholds, delivering ROI improvements across three product lines.
- Same-day metric visibility for cross-functional product and operations leadership via Tableau and Looker dashboards tracking 15+ KPIs, eliminating weekly reporting delays.
- 45% conversion improvement from funnel analysis using GA4 and SQL, isolating drop-off points and measuring post-launch impact of product changes on downstream user behavior.
- Trend forecasting models built in Python across 3 product lines, projecting quarterly performance with 85% accuracy and enabling planning decisions 6 weeks ahead of each cycle.

PROJECTS

Enchanted AdLab | [Live App](#) | Python, Streamlit, SciPy, Scikit-learn, DuckDB, Plotly

Mar 2026

- Full-stack A/B platform: auto-selected Z/T/Chi² tests, Bayesian posteriors, sequential p-values, SRM detection, and T-Learner uplift modeling across user segments.
- DuckDB SQL lab with production-style queries on user and revenue data, and a real-time revenue impact calculator showing experiment lift in dollars per cohort.

Revenue Drop Diagnosis + Marketing Attribution | [Live Demo](#) | SQL, Python, Scikit-learn, GA4, Tableau

Mar 2026

- 23% revenue decline diagnosed by mining SQL to isolate the affected segment and 2-week window, identified 3 root causes across pricing and product mix, and delivered a dashboard.
- Python attribution model showed 2 channels drove 78% of revenue at 3.5x ROAS while 3 others consumed 40% of budget with minimal return, driving a data-driven reallocation decision.

Customer Churn Prediction | [Model Repository](#) | Python, Scikit-learn, SQL, Tableau

Oct 2025

- 84% accurate Random Forest model across 50K+ records, segmenting churn risk by behavioral and demographic patterns into 3 intervention tiers with \$140K estimated retention impact.
- Feature importance analysis revealed tenure, usage frequency, and contract type as top predictors, enabling product teams to target interventions at highest-risk lifecycle stages.

EDUCATION

Baruch College, Zicklin School of Business

Expected May 2026

M.S. in Business Analytics, GPA: 3.6/4.0 | Pliner Bloom Scholar | Coursework: Statistical Modeling, Data Mining, Applied Regression, ML
