SUMMARY

I don't collect tools; I ship outcomes. Specializing in turning fragmented data chaos into unified reporting layers. Recent impact: Consolidated 7+ sources across 26 CUNY institutions, cutting reporting latency by 55%. [\[↗ Interactive Proof & Live Demos\]](#)

EXPERIENCE

Research Foundation of CUNY | New York, NY

Aug 2025 – Present

Data Specialist Intern

- Cut cross-institutional reporting time by 55% by developing automated SQL and BigQuery pipelines, replacing manual spreadsheet exports with self-serve Power BI dashboards for operations teams.
- Improved data accuracy by 37% for operational planning and compliance by designing robust validation and reconciliation frameworks across workforce and leave datasets.
- Reduced weekly manual reporting workload by 50% and freed capacity for high-value analytics by automating ETL pipelines and dashboard refresh cycles using Python and BigQuery.
- Resolved long-standing reporting discrepancies across 26 institutions by consolidating 7+ fragmented data sources into a unified GCP reporting layer. [\[↗ View the Unified Reporting Engine\]](#)
- Prevented executive reporting failures by identifying and patching a critical data integrity issue undetected for 2+ cycles across 3 institutions via Python-based EDA.

I3 Infosoft Pvt. Ltd. | Noida, India

Sep 2022 – Jul 2024

Data Analyst

- Lifted campaign engagement by 18% and drove quarterly channel strategy by designing Python customer segmentation models and executing A/B experiments across 1M+ CRM records.
- Saved 6 hours weekly in report production and expanded team capacity for two additional client workstreams by replacing manual CRM reporting with automated SQL pipelines.
- Improved inventory planning accuracy by 20% and reduced stockouts by designing a Python time-series forecasting model to project monthly demand across product lines.
- Accelerated operations response times to same-day visibility by implementing Power BI and Tableau dashboards tracking 15+ KPIs across SLA compliance, fulfillment, and cost metrics.
- Reduced cross-team reporting turnaround by 25% and accelerated query runtimes by migrating 10+ fragmented datasets into normalized relational SQL structures.

PROJECTS

Transit Operations Performance Analytics System | [\[↗ View Architecture & Live Heatmap\]](#) | Python, SQL, Power BI, Tableau

Dec 2025

- Analyzed ridership patterns across 400+ subway stations by building a Python and SQL pipeline to process 3M+ NYC Transit turnstile records into structured operational databases.
- Improved data reliability for management review by implementing SQL validation checks across station entry totals, delivering confidential summary reports on facilities performance.

Customer Churn Prediction | [\[↗ View Model Insights & Charts\]](#) | Python, Scikit-learn, SQL, Power BI

Oct 2026

- Achieved 84% classification accuracy in identifying high-risk churn segments by developing a Random Forest classifier using Python feature engineering and SQL-based EDA.
- Enabled self-serve retention strategy prioritization by delivering a Power BI dashboard that surfaced churn rates, customer lifetime value, and key retention KPIs.

EDUCATION

Baruch College, Zicklin School of Business

Expected May 2026

M.S. in Business Analytics, GPA: 3.6/4.0 | Coursework: Data Mining, Database Management, Applied NLP, R Programming

TECHNICAL SKILLS

Languages & Query: SQL (Advanced), Python (Pandas, NumPy, Scikit-learn), R

Analytics: A/B Testing, Experimentation Analysis, Hypothesis Testing, Cohort Analysis, Forecasting, Supervised Learning, Customer Segmentation, Pricing Analytics, ROI Modeling

Cloud & Pipelines: Google Cloud Platform (GCP), BigQuery, GCP Data Lakes, Azure Data Studio, ETL Pipeline Development, Data Warehousing

BI & Visualization: Power BI, Tableau, Looker, Advanced Excel (PivotTables, VLOOKUP)

Data Quality: Data Validation, Data Quality Monitoring, Data Lineage Documentation, Data Governance

Certifications: Google Data Analytics Professional Certificate
