

YASHPAL SAINI

New York, NY | (646) 289-1606 | yashsaini30668@gmail.com | [Technical Portfolio](#) | [LinkedIn](#) | [GitHub Profile](#)

SUMMARY

Analytics Engineer specializing in data pipeline architecture, predictive analytics, and end-to-end BI systems. Recent work includes reducing reporting latency by 55% across 26 CUNY institutions through centralized reporting infrastructure. I also built an [automated company intelligence engine](#) that generates industry-specific data pipeline recommendations and deployment roadmaps.

EXPERIENCE

Research Foundation of CUNY | New York, NY

Aug 2025 – Present

Data Specialist Intern

- Cut cross-institutional reporting time by 55% by developing automated SQL and BigQuery pipelines, replacing manual spreadsheet exports with self-serve Power BI dashboards for operations teams.
- Improved data accuracy by 37% for operational planning and compliance by designing robust validation and reconciliation frameworks across workforce and leave datasets.
- Reduced weekly manual reporting workload by 50% and freed capacity for high-value analytics by automating ETL pipelines and dashboard refresh cycles using Python and BigQuery.
- Resolved long-standing reporting discrepancies across 26 institutions by consolidating 7+ fragmented data sources into a [unified GCP reporting layer](#).
- Prevented executive reporting failures by identifying and patching a critical data integrity issue undetected for 2+ cycles across 3 institutions via Python-based EDA.

I3 Infosoft Pvt. Ltd. | Noida, India

Sep 2022 – Jul 2024

Data Analyst

- Lifted campaign engagement by 18% and drove quarterly channel strategy by designing Python customer segmentation models and executing A/B experiments across 1M+ CRM records.
- Saved 6 hours weekly in report production and expanded team capacity for two additional client workstreams by replacing manual CRM reporting with automated SQL pipelines.
- Improved inventory planning accuracy by 20% and reduced stockouts by designing a Python time-series forecasting model to project monthly demand across product lines.
- Accelerated operations response times to same-day visibility by implementing Power BI and Tableau dashboards tracking 15+ KPIs across SLA compliance, fulfillment, and cost metrics.
- Reduced cross-team reporting turnaround by 25% and accelerated query runtimes by migrating 10+ fragmented datasets into normalized relational SQL structures.

PROJECTS

Transit Operations Performance Analytics System | [Technical Repository](#) | *Python, SQL, ETL, Data Pipeline Development, Power BI*

Dec 2025

- Analyzed ridership patterns across 400+ subway stations by building a cloud pipeline to process 3M+ NYC Transit turnstile records, documented in an [end-to-end architecture case study](#).
- Improved data reliability for management review by implementing SQL validation checks across station entry totals, delivering confidential summary reports on facilities performance.

Customer Churn Prediction | [Model Repository](#) | *Python, SQL, Machine Learning, Feature Engineering, Classification, Power BI*

Oct 2025

- Achieved 84% classification accuracy in identifying high-risk churn segments by developing a Random Forest classifier using Python feature engineering and SQL-based EDA.
- Enabled self-serve retention strategy prioritization by delivering a live predictive Power BI dashboard that surfaced churn rates, customer lifetime value, and actionable retention KPIs.

EDUCATION

Baruch College, Zicklin School of Business

Expected May 2026

M.S. in Business Analytics, GPA: 3.6/4.0 | Coursework: Data Mining, Database Management, Applied NLP, R Programming

TECHNICAL SKILLS

Languages & Query: SQL (Advanced), Python (Pandas, NumPy, Scikit-learn), R

Analytics: A/B Testing, Experimentation Analysis, Hypothesis Testing, Cohort Analysis, Forecasting, Supervised Learning, Customer Segmentation, Pricing Analytics, ROI Modeling

Cloud & Pipelines: Google Cloud Platform (GCP), BigQuery, GCP Data Lakes, Azure Data Studio, ETL Pipeline Development, Data Warehousing

BI & Visualization: Power BI, Tableau, Looker, Advanced Excel (PivotTables, VLOOKUP)

Data Quality: Data Validation, Data Quality Monitoring, Data Lineage Documentation, Data Governance

Certifications: Google Data Analytics Professional Certificate
